DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of Group I, Claims 1, 2 and 13-16 in the reply filed on 10/17/06 is acknowledged.

Claims 3-12 and 17 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected Invention, there being no allowable generic or linking claim.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 13 are rejected under 35 U.S.C. 102(b) as being anticipated by Kobayashi et al.

In regard to claim 13, the Kobayashi et al. reference discloses a "system" (Figure 1) for preparing one or more materials in a batch process for use in a following downstream process, the system comprising:

"means for calculating" (a collective liquid preparation program) a necessary amount of the material for the following process; and

"means for allocating" (3a-3h, i.e. measuring units) the calculated amount of the material to following predetermined number of batches if the calculated necessary amount is less than a predetermined amount. The predetermined amount would have

to be less than the capacity of pot 5a and more than a minimum amount of zero, as claimed.

In regard to claim 1, the method would be inherent during normal use and operation of the device.

Allowable Subject Matter

Claims 2 and 14-16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The Walser et al. and Kappelhoff et al. references pertain to various batch processing systems, similar to Applicant's device.
